OVERHUNG LOAD ADAPTORS

*ZERO-MAX Is A
World-Leading Expert In
Overhung Load Technology*

The first complete line of SAE "A" through SAE "F" mount OHLA overhung load adaptors was designed by ZERO-MAX. We set the industry standard with the OHLA design. Today, we provide immediate shipment of standard models from stock.

From the smallest Model 200 SAE "A" mount to the largest Model 1500 SAE "F" mount, OHLA's feature rugged housings of cast iron, shafts of 130,000 PSI stress-proof steel, ball or tapered-roller bearings, many different shaft options and attractively painted housings. All models may be either face or foot-mounted.

We offer many custom options or we'll create a special design for your application when needed.

Count On OHLA's For These Important Benefits:

- Eliminates premature motor or pump failure due to overhung loads (axial and radial) on your motor or pump shaft.
- Prevents contamination of hydraulic fluid in harsh environments.
- Provides a solid, permanent mounting surface.
- Permits the removal of hydraulic motors for servicing without disturbing driven gears, pulleys or sprockets.
- Seals out dirt and grime.

Model 200 SAE "A" Mount

Applications utilizing SAE "A" 2-bolt mount with ball bearings for motor or pump shafts up to 1 inch in diameter (see page 4).

Model 300 SAE "A" Mount

SAE "A" 2-bolt mount with same mounting dimensions as Model 200, but utilizes larger ball bearings which allow for heavier overhung loads and a larger input bore diameter (up to 1.25") (see page 5).

Model 400

4-bolt mounting (non-SAE) accommodates same loads as the Model 200 with ball bearings for motor and pump shafts up to 1 inch in diameter (see page 6).

Model 500 SAE "A" Mount

SAE "A" 4-bolt mount, which uses tapered-roller bearings. Standard input bores include: 1-1/4" keyed, 1"-6B spline, or 14 tooth 12/24 spline (see page 7).

Model 600 SAE "B" Mount

SAE "B" 2- or 4-bolt mount using tapered-roller bearings. Standard input bores include: 7/8", 1", or 1-1/4" keyed; 13 tooth 16/32 spline, or 15 tooth 16/32 spline. Also available with 1" keyed through-bore as a standard (see page 8).

Model 800 SAE "C" Mount

SAE "C" 2- or 4-bolt mount using tapered-roller bearings. Standard input bores include: 7/8", 1", or 1-1/4" keyed; 14 tooth 12/24 spline. Also available with 1" keyed through-bore as a standard (see page 9).

Model 900 SAE "C-C" Mount

SAE "C" 2- or 4-bolt mount with same mounting dimensions as the Model 800, but using larger tapered-roller bearings which allow for heavier overhung loads and a larger input bore diameter. Standard input bores include: 1-1/2", or 1-3/4" keyed; 14 tooth 12/24 spline, or 17 tooth 12/24 spline (see page 10).

Model 1100 SAE "D" Mount

SAE "D" mount using large tapered-roller bearings for heavy-duty applications. Standard input bores include: 1-3/4" keyed, or 13 tooth 8/16 spline (see page 11).

Model 1250 SAE "E" Mount & Model 1500 SAE "F" Mount

Both the SAE "E" and SAE "F" mounts have the same physical size; only the pilot diameter and bolt circle are different for motor or pump mounting. These models use large spherical-roller bearings for heavy-duty applications. Input bores are made to customer specifications up to a 2-1/2" diameter (see page 12).

Custom Models

Modified dimensions and special features are available (see page 13).

OHLA® SIZING AND SELECTING

OVERHUNG LOAD ADAPTORS

1. Determine proper SAE flange mount for your application (SAE A, B, C, C-C, D, E, F)

2. Calculate the overhung load using the following formula:

$$\text{OHL (Overhung Load)} = \frac{63000 \times \text{HP} \times \text{F}}{\text{N} \times \text{R}}$$

HP = Transmitted Horsepower

N = RPM of Shaft

R = Radius of sprocket, pulley, etc. in inches

F = Load Connection Factor

Load Connection Factor

1.00 - Single Chain Drives

1.25 - Spur or Helical Gear Drives or Double Chain Drives

1.50 - V-Belt Drives

2.00 - Timing Belt Drives

2.50 - Flat Belt Drives

Overhung Load Adaptor

3. Calculate bearing life of the selected model using the formulas from the following table:

Note:

The bearing life calculations shown are to be used for radial loading only. Consult factory if more complex loading (Radial, Axial, Tangential) is present.

Lubrication: (See page 15)
